

The Central Regions of Active Galaxies

Reinhard Genzel (Max-Planck-Institut fuer extraterrestrische Physik, Garching, Germany)

Starting from recent progress in infrared to millimeter spectroscopy and high resolution imaging of the nuclei of starburst galaxies, AGNs, and ultra-luminous galaxies a discussion will be given what ALMA might contribute to this field.

Abstract submitted for Science with the Atacama Large Millimeter Array, 6 – 8 October 1999, Washington, D. C.
